

A BETTER VERSION --> https://neetcode.io/				
Category		Name	Link	Notes
https://youtu.be/KLlXCFG5nA	Arrays	Two Sum	https://leetcode.com/problems/two-sum/	use hash map to instantly check for difference value, map will add index of last occurrence of a num, don't use same element twice;
https://youtu.be/1pk0XD63yU	Arrays	Best Time to Buy and Sell Stock	https://leetcode.com/problems/best-time-to-buy-and-sell-stock/	find local min and search for local max, sliding window;
https://youtu.be/3OamN90kPa	Arrays	Contains Duplicate	https://leetcode.com/problems/contains-duplicate/	hashset to get unique values in array, to check for duplicates easily
https://youtu.be/bNvYQlZwAlk	Arrays	Product of Array Except Self	https://leetcode.com/problems/product-of-array-except-self/	make two passes, first in-order, second in-reverse, to compute products
https://youtu.be/5WZt3MMT06c	Arrays	Maximum Subarray	https://leetcode.com/problems/maximum-subarray/	pattern: prev subarray cant be negative, dynamic programming; compute max sum for each prefix
https://youtu.be/DXVv6YwFcRm	Arrays	Maximum Product Subarray	https://leetcode.com/problems/maximum-product-subarray/	dp: compute max and max-abs-val for each prefix subarr;
https://youtu.be/nVnW4P8b1VA	Arrays	Find Minimum in Rotated Sorted Array	https://leetcode.com/problems/find-minimum-in-rotated-sorted-array/	check if half of array is sorted in order to find pivot, arr is guaranteed to be in at most two sorted subarrays
https://youtu.be/UX8ENwh8oY8	Arrays	Search in Rotated Sorted Array	https://leetcode.com/problems/search-in-rotated-sorted-array/	at most two sorted halves, mid will be apart of left sorted or right sorted, if target is in range of sorted portion then search it, otherwise search other half
https://youtu.be/jz2zG8nZ89A	Arrays	3Sum	https://leetcode.com/problems/3sum/	sort input, for each first element, find next two where a + b+c, if a=prevA, skip a, if b=prevB skip b to elim duplicates; to find b,c use two pointers, left/right on remaining list;
https://youtu.be/UuItK8wPaAo	Arrays	Container With Most Water	https://leetcode.com/problems/container-with-most-water/	shrinking window, left/right initially at endpoints, shift the pointer with min height;
https://youtu.be/gYUrDV4ZtY	Binary	Sum of Two Integers	https://leetcode.com/problems/sum-of-two-integers/	add bit by bit, be mindful of carry, after adding, if carry is still 1, then add it as well;
https://youtu.be/5Km3utkw7e	Binary	Number of 1 Bits	https://leetcode.com/problems/number-of-1-bits/	modulo, and dividing n; mod and div are expensive, to divide use bit shift, instead of mod to get 1's place use bitwise & 1;
https://youtu.be/8y8M56SRlWw	Binary	Counting Bits	https://leetcode.com/problems/counting-bits/	write out result for num=16 to figure out pattern; res[i] = res[i - offset], where offset is the biggest power of 2 <= i;
https://youtu.be/WnPLSRLSANE	Binary	Missing Number	https://leetcode.com/problems/missing-number/	compute expected sum - real sum; xor n with each index and value;
https://youtu.be/UcoN6UAI6A	Binary	Reverse Bits	https://leetcode.com/problems/reverse-bits/	reverse each of 32 bits;
https://youtu.be/Y0IT9f3c7aI	Dynamic Programming	Climbing Stairs	https://leetcode.com/problems/climbing-stairs/	subproblem find (n-1) and (n-2), sum = n;
https://youtu.be/H9bfaezjoqs	Dynamic Programming	Coin Change	https://leetcode.com/problems/coin-change/	top-down: recursive dfs, for amount, branch for each coin, cache to store prev coin_count for each amount; bottom-up: compute coins for amount = 1, up until n, using for each coin (amount - coin), cache prev values
https://youtu.be/cWnW0hdFY	Dynamic Programming	Longest Increasing Subsequence	https://leetcode.com/problems/longest-increasing-subsequence/	recursive: foreach num, get subseq with num and without num, only include num if prev was less, cache solution of each; dp=subseq length which must end with each num, curr num must be after a prev dp or by itself;
https://youtu.be/Ua0Gh3iSWM	Dynamic Programming	Longest Common Subsequence	https://leetcode.com/problems/longest-common-subsequence/	recursive: if first chars are equal find lcs of remaining of each, else max of: lcs of first and remain of 2nd and lcs of 2nd remain of first, cache result; nested forloop to compute the cache without recursion;
https://youtu.be/5x9NnGnc3A	Dynamic Programming	Word Break Problem	https://leetcode.com/problems/word-break/	for each prefix, if prefix is in dict and wordbreak(remaining str)=True, then return True, cache result of wordbreak;
https://youtu.be/G8BK7V5k6dG	Dynamic Programming	Combination Sum	https://leetcode.com/problems/combination-sum/	visualize the decision tree, base case is curSum > > target, each candidate can have children of itself or elements to right of it in order to elim duplicate solutions;
https://youtu.be/773zK8wPyKq	Dynamic Programming	House Robber	https://leetcode.com/problems/house-robber/	for each num, get max of prev subarr, or num + prev subarr not including last element, store results of prev, and prev not including last element
https://youtu.be/rWJ4CYYOxM	Dynamic Programming	House Robber II	https://leetcode.com/problems/house-robber-ii/	subarr = arr without first & last, get max of subarr, then pick which of first should be added to it
https://youtu.be/6aEYtOWuJ	Dynamic Programming	Decode Ways	https://leetcode.com/problems/decode-ways/	can cur char be decoded in one or two ways? Recursion -> cache -> iterative dp solution, a lot of edge cases to determine, 52, 31, 29, 10, 20 only decoded one way, 11, 26 decoded two ways
https://youtu.be/llEsdauD4ly	Dynamic Programming	Unique Paths	https://leetcode.com/problems/unique-paths/	work backwards from solution, store paths for each position in grid, to further optimize, we don't store whole grid, only need to store prev row;
https://youtu.be/yAn0Czclv8	Dynamic Programming	Jump Game	https://leetcode.com/problems/jump-game/	visualize the recursive tree, cache solution for O(n) time/mem complexity, iterative is O(1) mem, just iterate backwards to see if element can reach goal node, if yes, then set it equal to goal node, continue;
https://youtu.be/mQeF6bN8hmK	Graph	Clone Graph	https://leetcode.com/problems/clone-graph/	recursive dfs, hashmap for visited nodes
https://youtu.be/EqI5nU9etnU	Graph	Course Schedule	https://leetcode.com/problems/course-schedule/	build adjacency_list with edges, run dfs on each V, if while dfs on V we see V again, then loop exists, otherwise V visit in a loop, 3 states= not visited, visited, still visiting
https://youtu.be/s-YkqHqGI	Graph	Pacific Atlantic Water Flow	https://leetcode.com/problems/pacific-atlantic-water-flow/	dfs each cell, keep track of visited, and track which reach pac, atl; dfs on cells adjacent to pac, atl, find overlap of cells that are visited by both pac and atl cells;
https://youtu.be/pV2kpPD66eI	Graph	Number of Islands	https://leetcode.com/problems/number-of-islands/	foreach cell, if cell is 1 and unvisited run dfs, increment count and marking each contiguous 1 as visited
https://youtu.be/68KZ7Mu_muU	Graph	Longest Consecutive Sequence	https://leetcode.com/problems/longest-consecutive-sequence/	use bruteforce and try to optimize, consider the max subseq containing each num; add each num to hashset, for each num if num-1 doesn't exist, count the consecutive nums after num, ie num+1; there is also a union-find solution;
https://youtu.be/6kTZnNnPy5	Graph	Alien Dictionary (Leetcode Premium)	https://leetcode.com/problems/alien-dictionary/	chars of a word not in order, the words are in order, find adjacency list of each unique char by iterating through adjacent words and finding first chars that are different, run topSort on graph and do top detection also;
https://youtu.be/7bXsUuwmnQo	Graph	Graph Valid Tree (Leetcode Premium)	https://leetcode.com/problems/graph-valid-tree/	union find, if union return false, loop exists, at end size must equal n, or its not connected; dfs to get size and check for loop, since each edge is double, before dfs on neighbor of N, remove N from neighbor list of neighbor;
https://youtu.be/8F1XPM4WOLc	Graph	Number of Connected Components	https://leetcode.com/problems/number-of-connected-components/	dfs on each node that hasn't been visited, increment component count, adjacency list; bfs and union find are possible;
https://youtu.be/ABN0QmlwOIM	Interval	Insert Interval	https://leetcode.com/problems/insert-interval/	insert new interval in order, then merge intervals; newinterval could only merge with one interval that comes before it, then add remaining intervals;
https://youtu.be/44H3cE2fFM	Interval	Merge Intervals	https://leetcode.com/problems/merge-intervals/	sort each interval, overlapping intervals should be adjacent, iterate and build solution; also graph method, less efficient, more complicated
https://youtu.be/nONC6xW0fIM	Interval	Non-overlapping Intervals	https://leetcode.com/problems/non-overlapping-intervals/	instead of removing, count how max num of intervals you can include, sort intervals, dp to compute max intervals up until the i-th interval;
https://youtu.be/PajnaZVPhbg	Interval	Meeting Rooms (Leetcode Premium)	https://leetcode.com/problems/meeting-rooms/	sort intervals by start time, if second interval doesn't overlap with first, then third def wont overlap with first;
https://youtu.be/FdJnTCVjUy	Interval	Meeting Rooms II (Leetcode Premium)	https://leetcode.com/problems/meeting-rooms-ii/	we care about the points in time where we are starting/ending a meeting, we already are given those, just separate start/end and traverse counting num of meetings going at these points in time; for each meeting check if a prev meeting has finished before curr started, using min heap;
https://youtu.be/G0_1ZF0S38	Linked List	Reverse a Linked List	https://leetcode.com/problems/reverse-linked-list/	iterate through maintaining cur and prev; recursively reverse, return new head of list
https://youtu.be/g8Te7iFR3vc	Linked List	Detect Cycle in a Linked List	https://leetcode.com/problems/detect-cycle-in-a-linked-list/	did it remember visited nodes; two pointers at different speeds, if they meet there is loop
https://youtu.be/7xidj4956u0	Linked List	Merge Two Sorted Lists	https://leetcode.com/problems/merge-two-sorted-lists/	insert each node from one list into the other
https://youtu.be/q5a5OigbtEQ	Linked List	Merge K Sorted Lists	https://leetcode.com/problems/merge-k-sorted-lists/	divided and conquer, merge lists, N Notalnodes, k-lists, O(N*k*logk). For each list, find min val, insert it into list, use priorityQ to optimize finding min O(N*logk)
https://youtu.be/KXuQxVeJv98	Linked List	Remove Nth Node From End Of List	https://leetcode.com/problems/remove-nth-node-from-end-of-list/	use dummy node at head of list, compute len of list; two pointers, second has offset of n from first;
https://youtu.be/55bf6tUKLM	Linked List	Reorder List	https://leetcode.com/problems/reorder-list/	reverse second half of list, then easily reorder it; non-optimal way is to store list in array;
https://youtu.be/741rL0L3Pnw	Matrix	Set Matrix Zeroes	https://leetcode.com/problems/set-matrix-zeroes/	use sets to keep track of all rows, cols to zero out, after, for each num if it is in a row or col then change it to 0; flag first cell in row, and col to mark row/col that needs to be zeroed;
https://youtu.be/8InmZnWukLM1	Matrix	Spiral Matrix	https://leetcode.com/problems/spiral-matrix/	keep track of visited cells; keep track of boundaries, layer-by-layer;
https://youtu.be/fMSJS7eO1w	Matrix	Rotate Image	https://leetcode.com/problems/rotate-image/	rotate layer-by-layer, use that it's a square as advantage, rotate positions in reverse order, store a temp, a = b, b = c, c = d, d = temp;
https://youtu.be/plfIQ_P5ia8E	Matrix	Word Search	https://leetcode.com/problems/word-search/	dfs on each cell, for each search remember visited cells, and remove cur visited cell right before you return from dfs;
https://youtu.be/wi9QwVH40E	String	Longest Substring Without Repeating	https://leetcode.com/problems/longest-substring-without-repeating-characters/	sliding window, if we see each char twice within cur window, shift start position;
https://youtu.be/gaXU1UyA8pk	String	Longest Repeating Character Replacement	https://leetcode.com/problems/longest-repeating-character-replacement/	PAW ATTENTION: limited to chars A-Z, for each capital char, check if it could create the longest repeating substring, use sliding window to optimize; check if windowlen-1 works, if yes, increment len, if not, shift window right;
https://youtu.be/JSio0Q4A_hm	String	Minimum Window Substring	https://leetcode.com/problems/minimum-window-substring/	need a num of unique char in T, HAVE is num of char we have valid count for, sliding window, move right until valid, if valid, increment left until invalid, to check validity keep track if the count of each unique char is satisfied;
https://youtu.be/9U1tInBqnCaA	String	Valid Anagram	https://leetcode.com/problems/valid-anagram/	hashmap to count each char in str1, decrement for str2;
https://youtu.be/vzdNOK2oBZE	String	Group Anagrams	https://leetcode.com/problems/group-anagrams/	for each of 26 chars, use count of each char in each word as tuple for key in dict, value is the list of anagrams;
https://youtu.be/W7aTsKdOFMg	String	Valid Parentheses	https://leetcode.com/problems/valid-parentheses/	push opening brace on stack, pop if matching close brace, at end if stack empty, return true;
https://youtu.be/7jX1k6PFWE	String	Valid Palindrome	https://leetcode.com/problems/valid-palindrome/	left, right pointers, update left and right until each points at alphabetum, compare left and right, continue until left >= right, don't distinguish between upper/lowercase;
https://youtu.be/KYQecbdf6_c	String	Longest Palindromic Substring	https://leetcode.com/problems/longest-palindromic-substring/	foreach char in str; consider if it were the middle, consider if pal was odd or even;
https://youtu.be/4BACGt5_du8	String	Palindromic Substrings	https://leetcode.com/problems/palindromic-substrings/	same as longest palindromic string, each char in str as middle and expand outwards, do same for pal of even len; maybe read up on manachers alg
https://youtu.be/81k_xaO5v8	String	Encode and Decode Strings (Leetcode)	https://leetcode.com/problems/encode-and-decode-strings/	store length of str before each string and delimiter like ";"
https://youtu.be/7TM3phVt6YQ	Tree	Maximum Depth of Binary Tree	https://leetcode.com/problems/maximum-depth-of-binary-tree/	recursive dfs to find max-depth of subtrees; iterative bfs to count number of levels in tree
https://youtu.be/vRbbsK0XCow	Tree	Same Tree	https://leetcode.com/problems/same-tree/	recursive dfs on both trees at the same time; iterative bfs compare each level of both trees
https://youtu.be/Qn5nZXEQ4MY	Tree	Invert/Flip Binary Tree	https://leetcode.com/problems/invert-binary-tree/	recursive dfs to invert subtrees; bfs to invert levels, use collections.deque; iterative dfs is easy with stack if doing pre-order traversal
https://youtu.be/Hr5cWUld4vU	Tree	Binary Tree Maximum Path Sum	https://leetcode.com/problems/binary-tree-maximum-path-sum/	helper returns maxPathsum without splitting branches, inside helper we also update maxSum by computing maxPathsum WITH a split;
https://youtu.be/G2mYAppFvY	Tree	Binary Tree Level Order Traversal	https://leetcode.com/problems/binary-tree-level-order-traversal/	iterative bfs, add prev level which doesn't have any nulls to the result;
https://youtu.be/j4Al2JiIH8	Tree	Serialize and Deserialize Binary Tree	https://leetcode.com/problems/serialize-and-deserialize-binary-tree/	bfs every single non-null node is added to string, and it's children are added too, even if they're null, deserialize by adding each non-null node to queue, dequeue node, it's children are next two nodes in string;
https://youtu.be/E36S5W9p4E	Tree	Subtree of Another Tree	https://leetcode.com/problems/subtree-of-another-tree/	traverse s to check if any subtree in s equals t; merkle hashing?
https://youtu.be/hh4IQGZ2zc	Tree	Construct Binary Tree from Preorder and Inorder Traversal	https://leetcode.com/problems/construct-binary-tree-from-preorder-and-inorder-traversal/	first element in pre-order is root, elements left of root in in-order are left subtree, right of root are right subtree, recursively build subtrees;
https://youtu.be/6AATKipsw	Tree	Validate Binary Search Tree	https://leetcode.com/problems/validate-binary-search-tree/	trick is use built in python min/max values float("inf"), "-inf", as parameters; iterative in-order traversal, check each val is greater than prev;
https://youtu.be/5LUXsvjmGwX	Tree	Kth Smallest Element in a BST	https://leetcode.com/problems/kth-smallest-element-in-a-bst/	non-optimal store tree in sorted array; iterative dfs in-order and return the kth element processed, go left until null, pop, go right once;
https://youtu.be/g2LMfuQR9k	Tree	Lowest Common Ancestor of BST	https://leetcode.com/problems/lowest-common-ancestor-of-a-bst/	compare p, q values to curr node, base case: one is in left, other in right subtree, then curr is lca;
https://youtu.be/foobopCjIH4Q	Tree	Implement Trie (Prefix Tree)	https://leetcode.com/problems/implement-trie-prefix-tree/	tree has children characters, and bool if it's an ending character, node DOESN'T have or need char, since root node doesn't have a char, only children;
https://youtu.be/8Tf05s_8IU	Tree	Add and Search Word	https://leetcode.com/problems/add-and-search-word-trie/	if char = "" run search for remaining portion of word on all of curr nodes children;
https://youtu.be/asbcE9m7z_U	Tree	Word Search II	https://leetcode.com/problems/word-search-ii/	trick: I thought use trie to store the grid, reverse thinking, instead store dictionary words, dfs on each cell, check if cell's char exists as child of root node in trie, if it does, update currNode, and check neighbors, a word could exist multiple times in grid, so don't add duplicates;
https://youtu.be/q5a5OigbtEQ	Heap	Merge K Sorted Lists	https://leetcode.com/problems/merge-k-sorted-lists/	we always want the min of the current frontier, we can store frontier in heap of size k for efficient pop/push; divide and conquer merging lists;
https://youtu.be/VP7aQeV6-k-s	Heap	Top K Frequent Elements	https://leetcode.com/problems/top-k-frequent-elements/	maintain heap's kept at size k, if its bigger than k pop the min, by the end it should be left with k largest;
https://youtu.be/tmhHWatupl	Heap	Find Median from Data Stream	https://leetcode.com/problems/find-median-from-data-stream/	minheap cur median, and all num greater than med in a minHeap, and all num less than med in a maxHeap, after every insertion update median depending on odd/even num of elements;
